

Using Technology To Protect Animals: Streamlining Animal Control

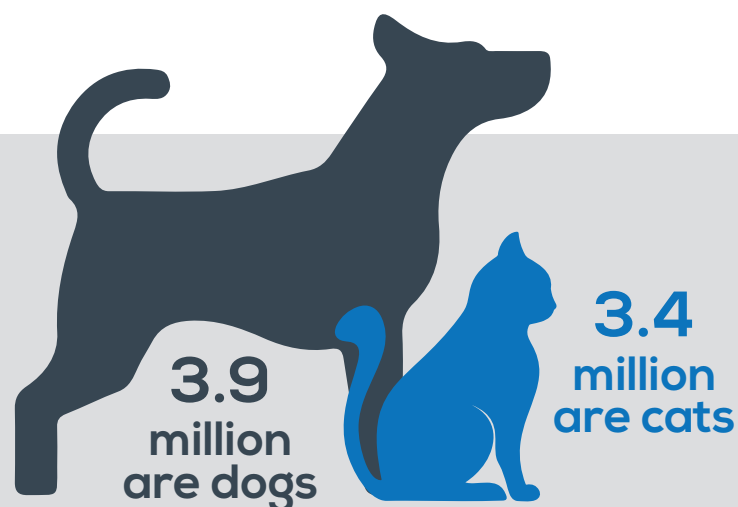

Your community protects the rights and safety of both your citizens and their companion animals. However, when the number of strays becomes problematic, you need processes in place that are streamlined and efficient. New solutions available in the cloud are making it cost-effective for even small communities to implement paperless, online systems for animal control.

There are more than **160 million** companion animals in the United States

7.6 million of these, companion animals enter shelters each year.

649,000 animals are reunited with their owners

Every year, about **2.7 million** animals are euthanized

Effective animal control management requires well-organized and efficient processes and staff

New solutions in the cloud provide mobile capabilities and GIS-equipped mapping tools for optimized routing and case management

Time-tracking tools and robust reporting provide data for agencies to identify trends in spending and streamline budgeting for animal control
