

# Top 4 Reasons You Should Choose Mobile for Permitting and Inspections

If your inspectors are mired in backlog and wasting time that could be out in the field having to do paperwork at the office, it's time to go mobile. Here are the top reasons you should implement mobile technology into your systems.

## 1 Efficiency improvements

Inspectors access the mobile app while out in the field to record not only notes, but photographs and GIS mapping information all in one place.

## 2 Routing capabilities

With the GIS-equipped mapping features on Comcate tools, inspectors route their days effectively.

## 3 Data accessibility

Inspectors access all case data from the inspection site, including owner names, property history and contractor information.

## 4 Consistency

Checklists, reminders and updates are all automatically generated for inspectors.
